### Steps of nucleic acid extraction and preparation

### Degree of automation

### Worktable setup in 5 minutes with 6-strip formats

1. Tips

2. Column sets

3. Samples

4. Elution tubes

No. of Samples	1-48
Sample Volumes	100µl -1000µl
Consumables	Spin Column
Typical Yield	30µg of 1 mL Blood
Processing Time	~90 min
Barcode Reading	included
Pipette	6
